Creating Adapters

Creating Adapters

Adapters are implemented using the Adapter Library, which is written in C.

Language bindings

There are currently no bindings for the library.

Testing your adapter

You can connect the browser extension to your adapter by clicking "Add custom adapter" in the extension settings.

Submitting your adapter

Requirements

- Must be open-sourced on GitHub
- Executables, plugins or scripts must be published via GitHub releases
- GitHub releases must be tagged as "vmajor.minor.patch" or "major.minor.patch" where major should be the current library revision
- Must use a unique port, which cannot be changed after submitting your adapter.
